

Podman

Accessing host ports from inside a container

```
virtualisation = {  
  oci-containers.containers = {  
    example-container = {  
      image = "example-image";  
      extraOptions = [ "--network=slirp4netns:allow_host_loopback=true" ];  
    };  
  };  
};
```

From the container's config, reference `host.containers.internal:PORT`
